Automation Assignment

Using WebdriverIO which is a JavaScript based Automation framework, build a custom framework for UI test automation of Enroute website, make use of Cucumber.

As a POC, implement a scenario for contacting Enroute using the Reach out to us form.

Scenario:
1. Open the main page: http://www.enroutesystems.com/
   - ◆ Verify the page is opened
2. Scroll to the "What we offer" section
   - ◆ Verify each tab has a heading and a description
3. Navigate to the Contact page
   - ◆ Verify the page is opened
4. Fill all the fields
   - ◆ Name (Full Name)
   - ◆ Email
   - ◆ Subject (Automation Assignment)
   - ◆ Message: "This is an automation message created for the Automation Assignment"
5. Verify the Send button is enabled
   - ◆ **Note: Do not perform a click action on the send button**

Bonus:
Create a custom reporter that logs the steps in real time, and not after the test has been performed.

Notes:
The provided solution must have an abstract navigation component (Page Object Model), so you can reuse it further in other different tests for navigation between pages.

Implemented solution must be provided as a link to a git repository.
